1 Installing VentureForth Tools

Someday, we may have a plugin architecture like Eclipse.
    http://www.eclipse.org
    http://www.eclipse.org/articles/Article-Update/keeping-up-to-date.html

1.1 Until then, we can use Eclipse as a model

- They have many plugins, as we can hope to someday.

- They originally used a zip model for updates

1.2 Place the Plugins zip file

Into the root of your VentureForth folder.

1.3 Extract the contents

1.3.1 If you double click the file in OS X

You will get a directory containing the contents, which you will need to integrate into the VentureForth directories.

1.3.2 Better to use unzip in the Terminal

The *unzip* command will integrate the files, as needed, and create the necessary directories for you.
